Trans. of Leningrad U. Vestnik (USSR) 1956 [v. 11] no. 19, p. 174-185.

An example is given of the application of F. A. Sludskii's method to the determination of the shape of the Earth's quasi-geoidol surface, which is of basic interest to inertial navigation error analysis. The results obtained by the method of Vening-Meinesz for free air mass anomalies characterize the topographic surface of the Earth better than the geoid, where the form of the geoid is the objective.
